DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-13, 41-42 are rejected under 35 U.S.C. 102(b) as being anticipated by Kimura et al. (U. S. Pat. 5,985,073).

Kimura et al. show a cylinder comprising fiber-reinforced plastic including at least one of aramide fibers and carbon fibers (see abstract and col. 3, lines 55-64) same as claimed. The cylinder of Kimura et al. can be used for drying tissue. Examiner did not give patentable weight for the intended use in the preamble. Since the cylinder of Kimura et al. comprises the same material as claimed, therefore, it is inherent for the cylinder of Kimura et al. to have the claimed coefficient of thermal expansion and heat resistant.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/712,608 Page 3

Art Unit: 3749

4. Claims 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kimura et al. (U. S. Pat. 5,985,073).

the cylinder of Kimura et al. as above includes all that is recited in claims 14-16 except for the diameter of the cylinder. It would have been an obvious matter of design choice to design the cylinder with any desired diameter, since such a modification would have involved a mere change in the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art. In re Rose, 105 USPQ 237 (CCPA 1955).

5. Claims 1-18, 35-46, 51, and 52 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 3,139,375 to Bryand in view of US Patent 5,985,073 to Kimura et al.

Bryand teaches a throughflow cylinder 82 with jacket, or covering, 30 to dry a paper tissue wherein the cylinder 82 and the jacket can be made of either stainless steel or synthetic plastic, such as "Teflon combined with other materials." Regarding claims 11-13, the cylinder 82 and the jacket 30 are arranged peripherally. Regarding claims 35-46, the cylinder and jacket are furthermore comprised of a plurality of segments 31-34 that are bonded together, forming a plurality of short cylindrical honeycomb sections. Note column 3, lines 27-75 and Figures 1-3. Bryand does not define the "Teflon combined with other materials" to be a fiber-reinforced plastic including at least one of aramide fibers and carbon fibers. Kimura et al. teaches a cylinder with Teflon 2 and a strength member 3a composed of the carbon fiber reinforced plastic composite material and a glass fiber reinforced plastic composite material (col. 5, line 62 to col. 6, line 4) to increase the cylinder strength and the rigidity. Therefore, it would have been obvious to one of ordinary skill in the art to use Teflon reinforced with a strength member 3a composed of the carbon fiber reinforced plastic composite material and a glass fiber reinforced plastic composite material and a glass fiber reinforced

Application/Control Number: 10/712,608

Art Unit: 3749

plastic composite material as the "Teflon combined with other materials" taught by Bryant in order to increase the cylinder strength and the rigidity. Regarding claims 14-16, 51 and 52, it would have been obvious to one of ordinary skill in the art to modify the cylinder taught by Bryand, as modified by Kimura et al., with the ranges presently claimed since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

Allowable Subject Matter

6. Claims 19-34 and 47-50 are allowed.

Response to Arguments

7. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

Page 5 Application/Control Number: 10/712,608

Art Unit: 3749

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

however, will the statutory period for reply expire later than SIX MONTHS from the date of this

final action.

9. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Jiping Lu whose telephone number is 571 272 4878. The

examiner can normally be reached on Monday-Friday, 9:00 AM - 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, EHUD GARTENBERG can be reached on 571 272-4828. The fax phone number for

the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
